

Auth0 - SMS INTEGRATION

How To Get Started

Auth0 provides a drop-in solution to **add authentication and authorization services** to their clients' applications. Mitto provides an SMS messaging service that can be used by Auth0 customers to **deliver multi-factor verification** via text messaging.

Mitto is integrated through independent app – custom SMS activity that can be downloaded from Auth0 Marketplace.

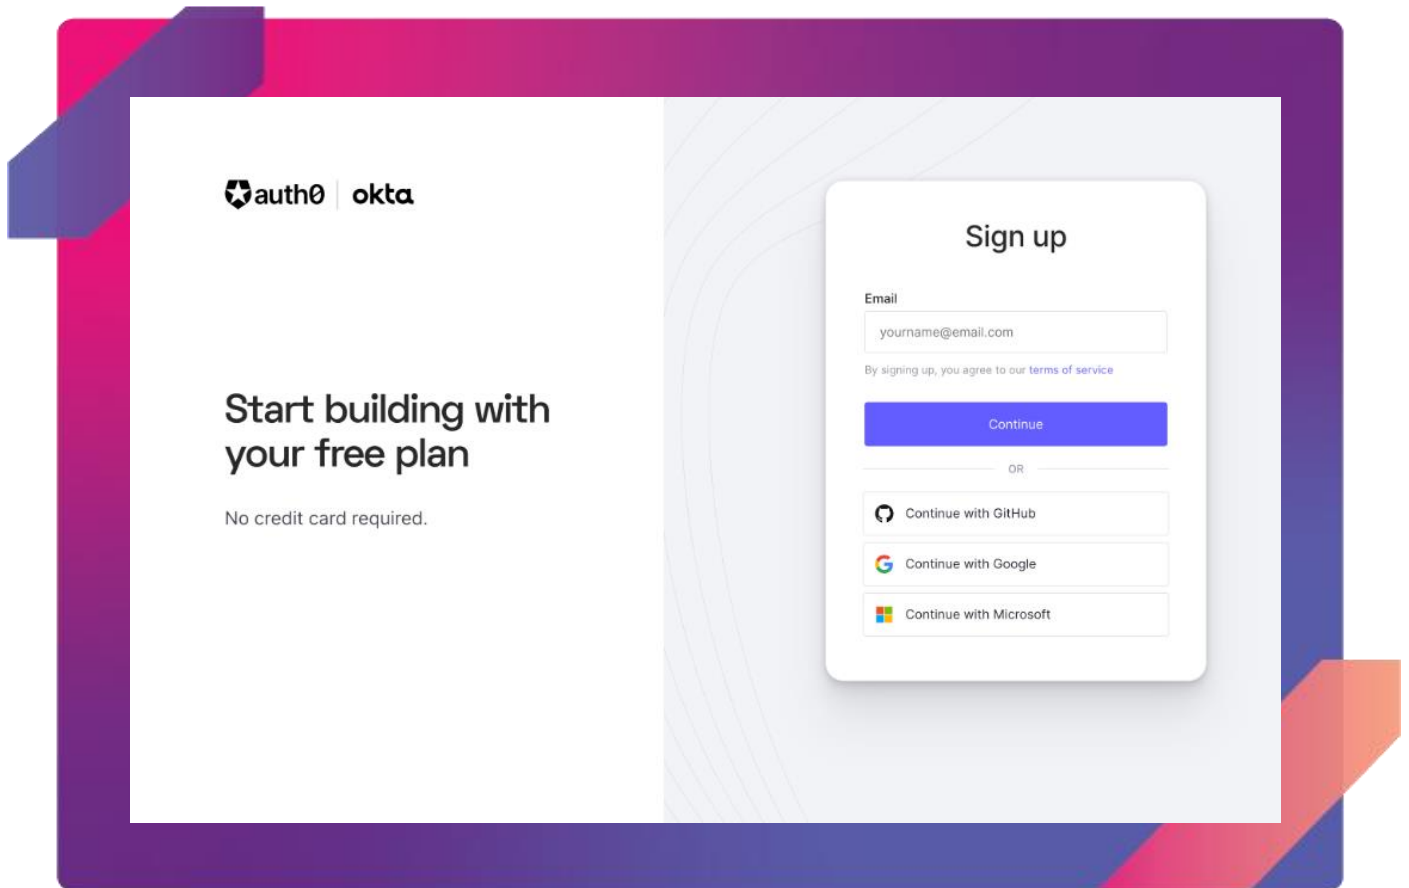

Prerequisites:

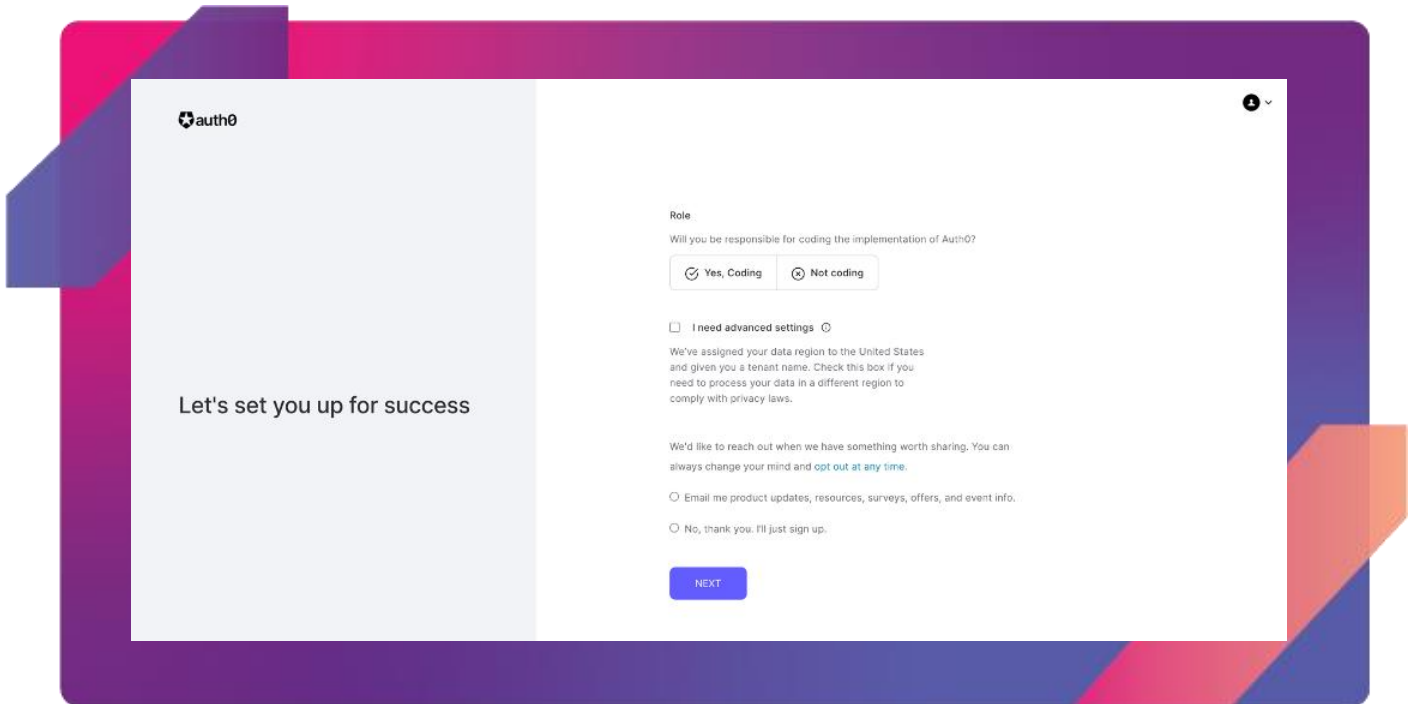

- Auth0 account

AUTH0 ACCOUNT AND MARKETPLACE

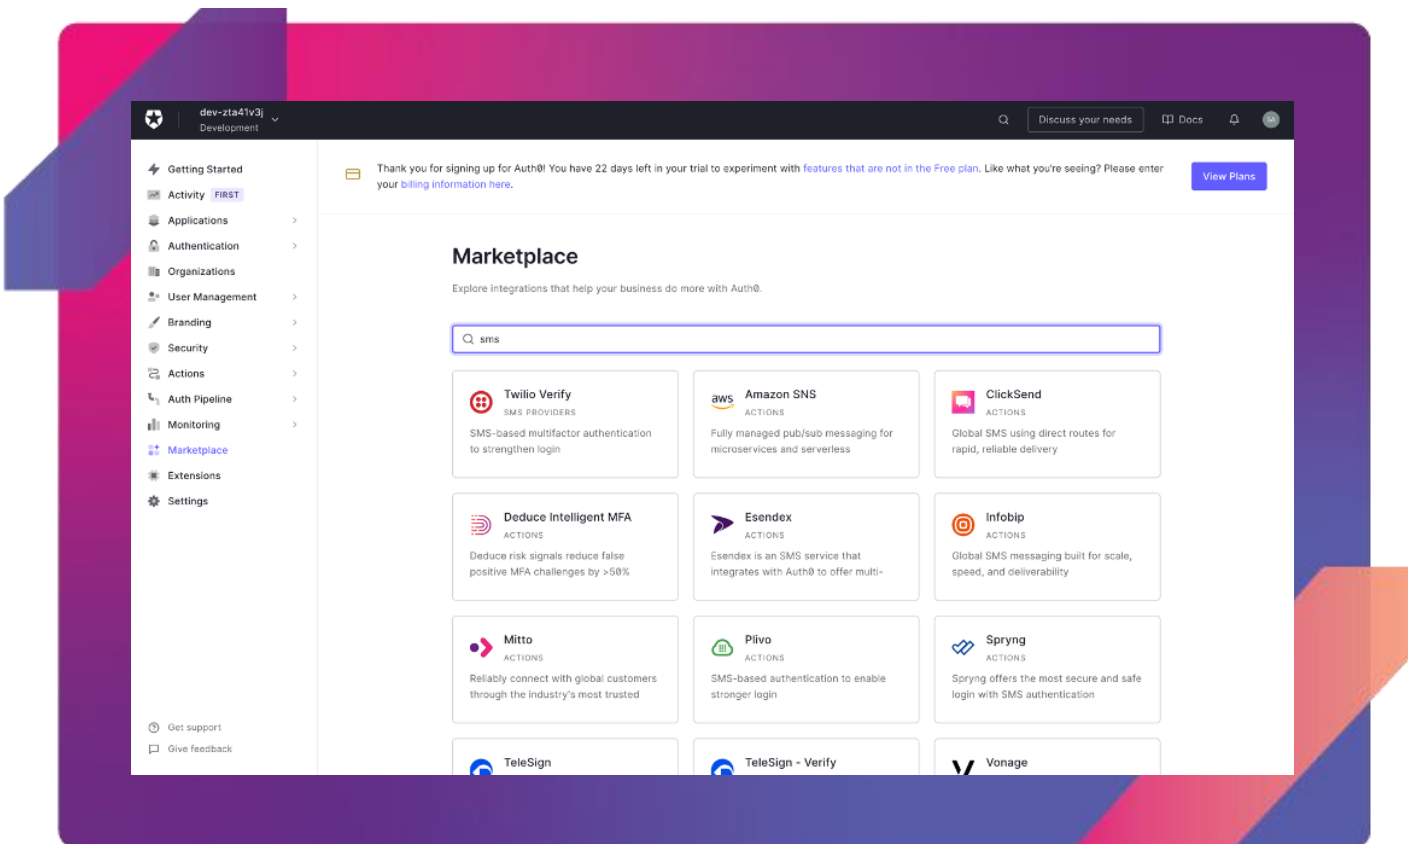

Steps:

- If you don't have an Auth0 account, please go to signup page to create it.

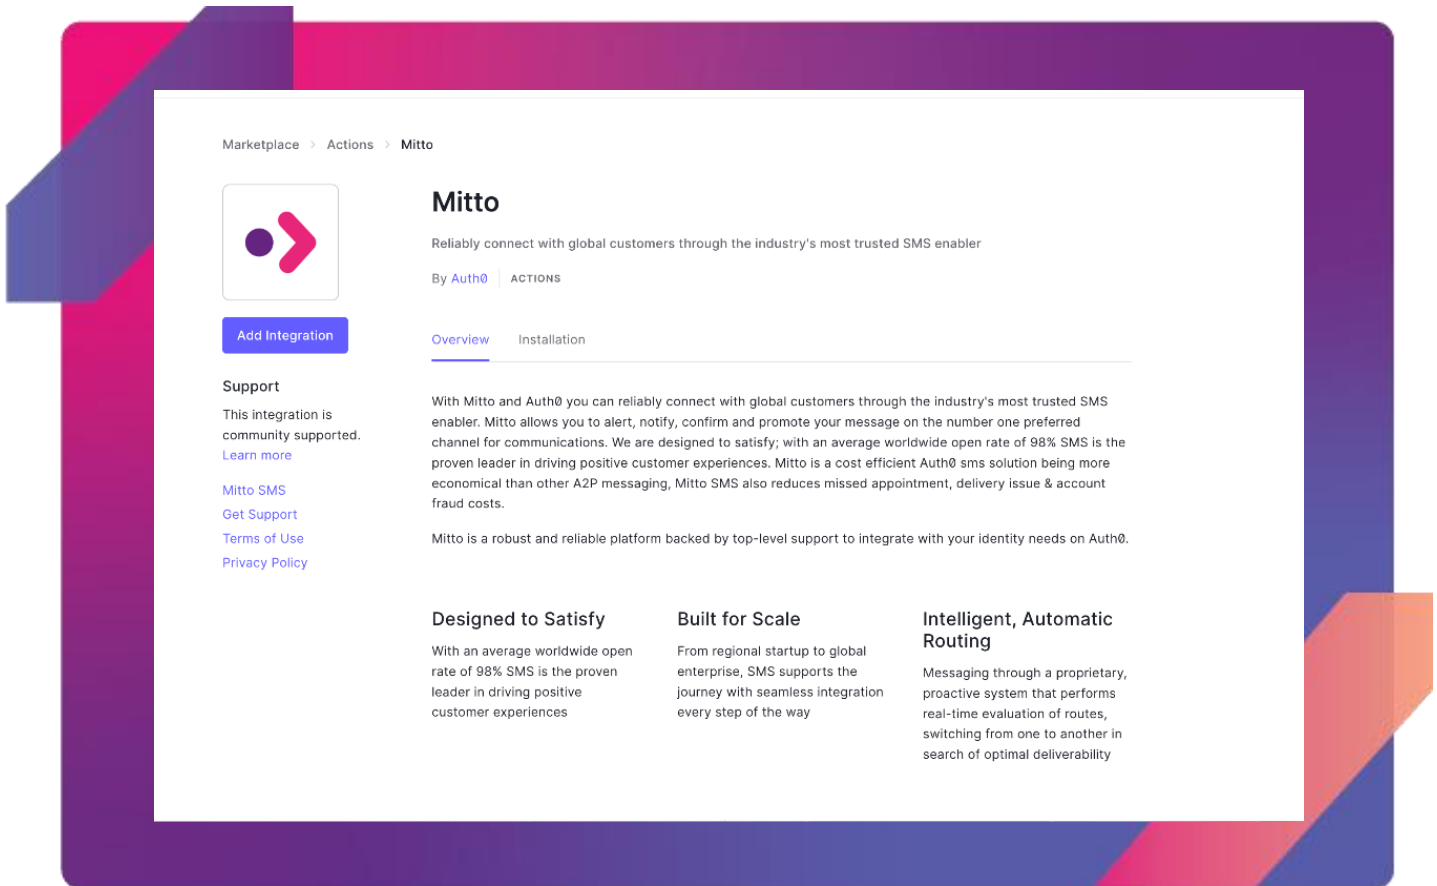

- When you land to your Auth0 account, go to Marketplace, search “sms”

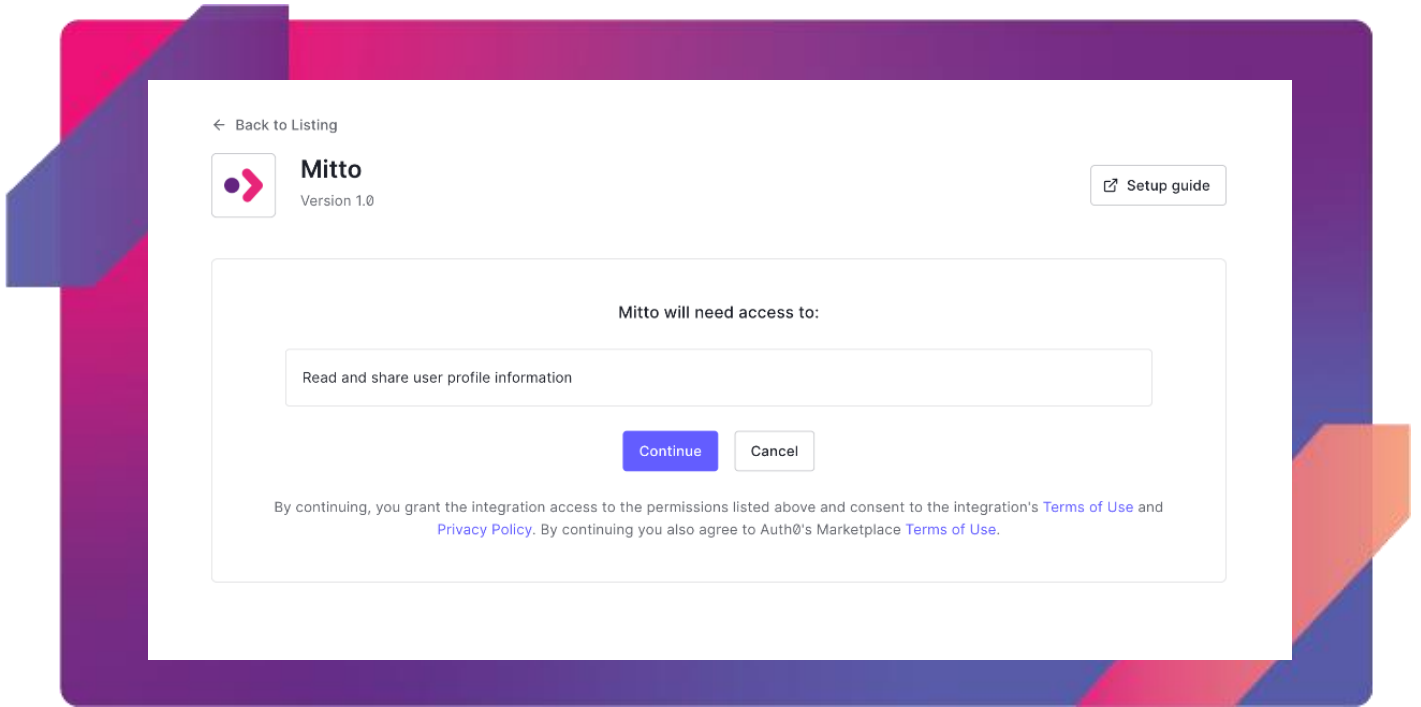

MITTO INTEGRATION

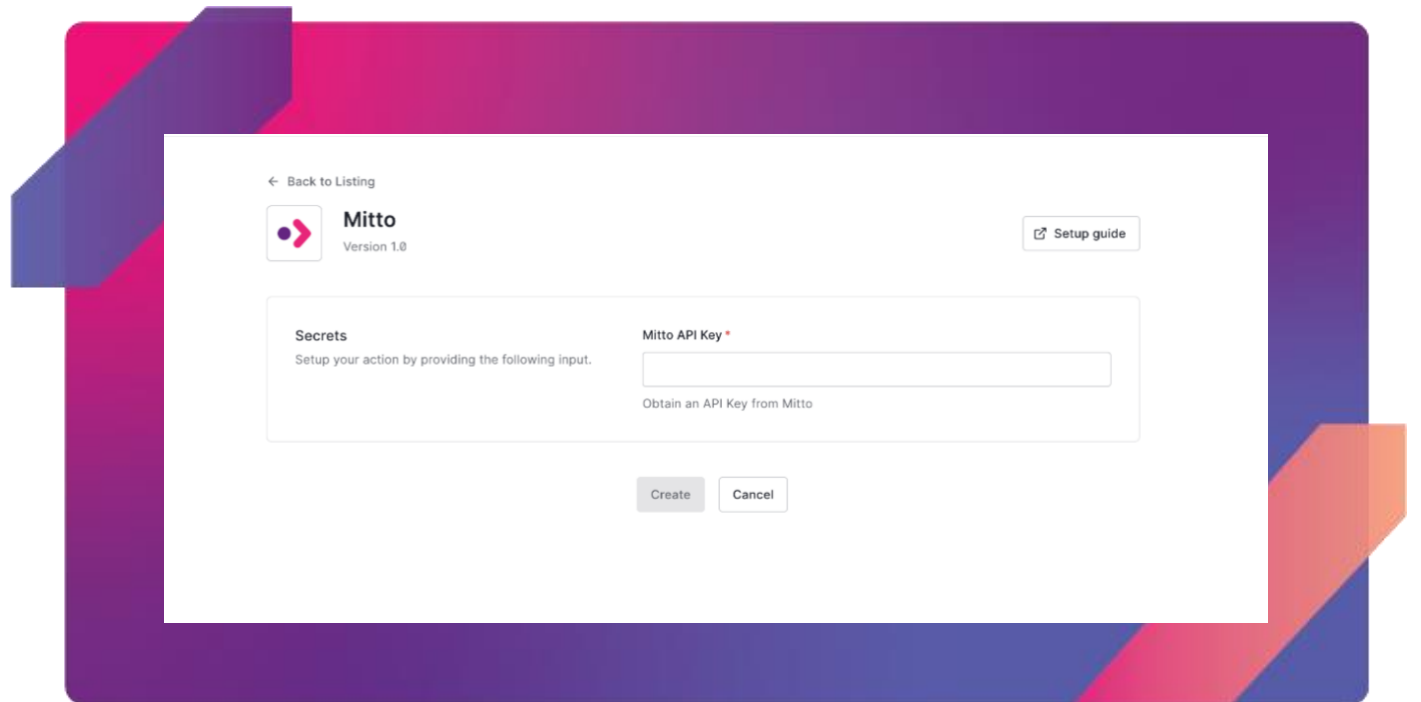

- Click on Mitto in your search results and then click button “Add integration”

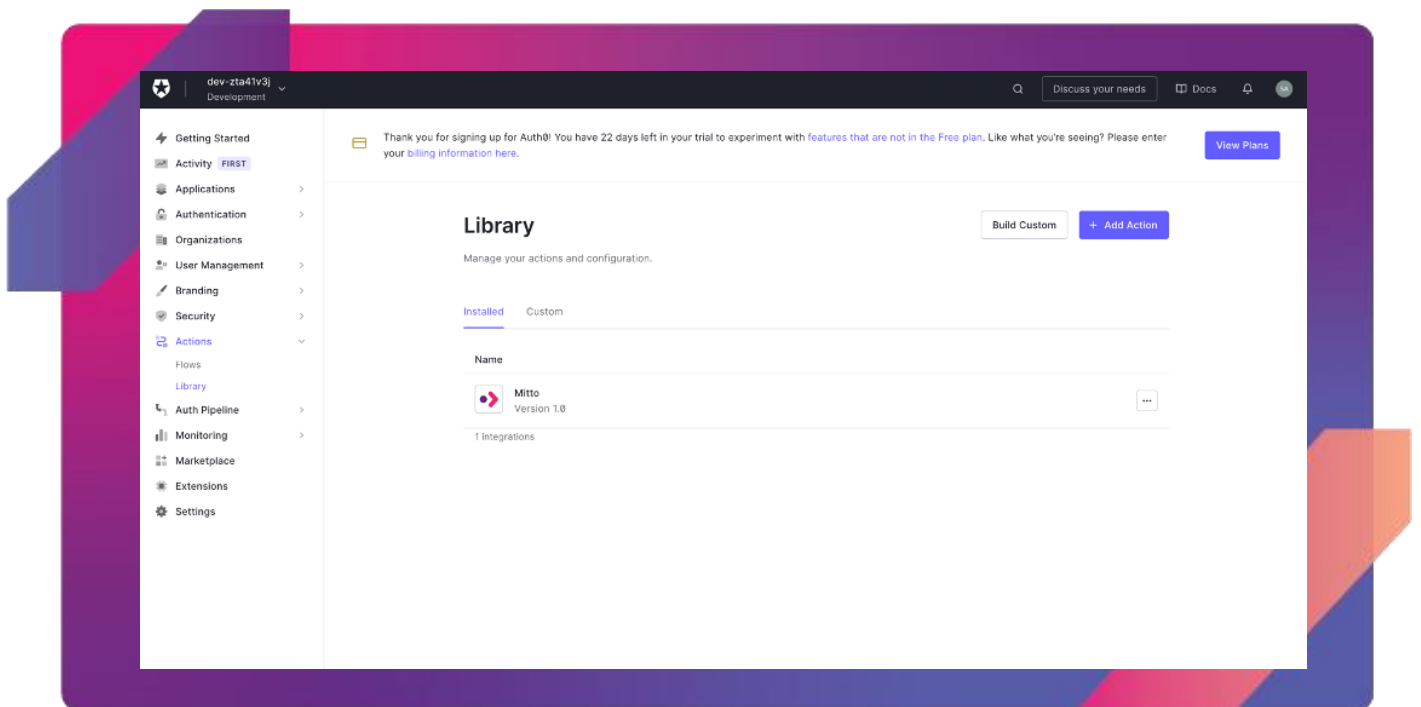

- Enable access for Mitto to read and share user profile

- Enter API key provided by Mitto

- Go to Actions – Library to see Mitto integration

IMPORTANT NOTE: We highly recommend testing this setup on a [staging or development server](#) before making the changes to your production login flow.
